

## Feature Test

Install Docker

Pull RabbitMQ Image

Install rabbitMQ

——To run rabbitMQ in docker on particular port(15672) and container name (testing-rabbitmq )——

```
docker run -d --hostname rabbitmq --name testing-rabbitmq -p 5672:5762 -p 5671:5671 -p 15672:15672 rabbitmq:3.6.6-management
```

Open gradle.properties file

Add——> useDocker=true

Open docker-rabbitmq.gradle

Add——>containerName = "testing-rabbitmq"

First Install Cucumber Plugin

Write a Feature and Scenario or Scenario Outline

Run as Cucumber feature

Copy paste the code from console to a java file

And write method definitions

Feature: eating apples

Scenario Outline: Checking How many apples I ate

Given I have <start> apples

When I eat <mid> apples

Then I have <end> apples remaining

Examples:

start	mid	end	
5  3	2		
12	2	10
